

**Amendments to the Claims**

A full listing of the claims is as follows:

1-25. (Canceled)

26. (Currently amended) A coating composition for enhancing the bio-activity of a surface of a medical device, said coating composition formed from an aqueous emulsion or dispersion comprising:

(a) a polycarbonate-polyurethane composition containing ~~[[an]]~~ a plurality of organic acid functional groups; and

~~(b) a molar excess of a polyfunctional cross-linking agent relative to the organic acid functional groups in the polycarbonate-polyurethane composition, said excess being reactive with bio-active agents containing cross-linking functional groups capable of reacting with the organic acid functional groups, wherein the cross-linking functional groups are present in an amount sufficient to cross-link at least some of the organic acid functional groups and provide unreacted cross-linking functional groups that can react with a bio-active agent.~~

27-35. (Canceled)

36. (Previously presented) The coating composition of claim 26, wherein said polyfunctional cross-linking agent is selected from the group consisting of polyfunctional aziridines, polyfunctional carbodiimides and combinations thereof.

37. (Previously presented) The coating composition of claim 26, wherein said bio-active agents are selected from the group consisting of thrombo-resistant agents, antibiotic agents, anti-tumor agents, growth hormones, antiviral agents, anti-angiogenic agents, angiogenic agents, anti-mitotic agents, anti-inflammatory agents, cell cycle regulating agents, genetic agents, hormones, chemically modified equivalents and combinations thereof.

38-40. (Canceled)

41. (New) The coating composition of claim 26, wherein the polyfunctional cross-linking agent has three or more cross-linking functional groups per molecule.
42. (New) The coating composition of claim 26, wherein the cross-linking functional groups are present in a molar excess relative to the organic acid functional groups in the polycarbonate-polyurethane composition.
43. (New) The coating composition of claim 26, wherein at least some of the cross-linking functional groups are reacted with a bio-active agent.
